

**REGION 2 WEEKLY HIGHLIGHTS TO ADMINISTRATOR
WEEK OF 12/10/18**

Hot Issues:

Limetree Bay Terminals, USVI: On 11/27 LBT submitted a Plantwide Applicability Limit (PAL) permit application. A PAL is a pollutant-specific, source-wide emission limitation, expressed in tons per year, which provides a voluntary alternative for complying with PSD permitting program requirements. The PAL will allow LBT the flexibility to make changes within the facility to adapt to market demands, without any deterioration to the air quality, by operating under the PAL. The 300-page application covers SO₂, NO_x, VOC, CO, PM, PM₁₀, and PM_{2.5}. R2 staff will meet with LBT on 12/11 to discuss the application.
